

RadioROM Spaced

100 TRACKS BEYOND THE EDGE OF THIS REALITY - OVER 12 HOURS OF NON-STOP MUSIC ON A SINGLE MP3-ROM

Compatible with PC, MP3 enabled DVD players, and both in-car MP3-CD & personal MP3-CD players

RadioROM Spaced contains 100 music tracks and 32 audio links. That's over 12 hours of music on this single disk. The tracks are organised using RadioROM's unique data base protocol MetaDynamix which ensures they run in a satisfying sequence. It is easy and quick to edit and customise the playlists to suit your mood and needs. The mp3 files on this disk can be played in MP3 enabled DVD players, in-car and personal MP3-CD players.

The integrated player application illustrated below is PC compatible and requires a small installation, under 40mb, because only the RadioROM application software and Java Virtual Machine multi-media support files are installed NOT the MP3 files.

This monitor provides sight of all the albums featured within the disk. These display as covers which can be scrolled through on the screen.

Every track is an original recording or high quality remix. All tracks are encoded at 128kbps.

This display shows the time elapsed of the track being played.

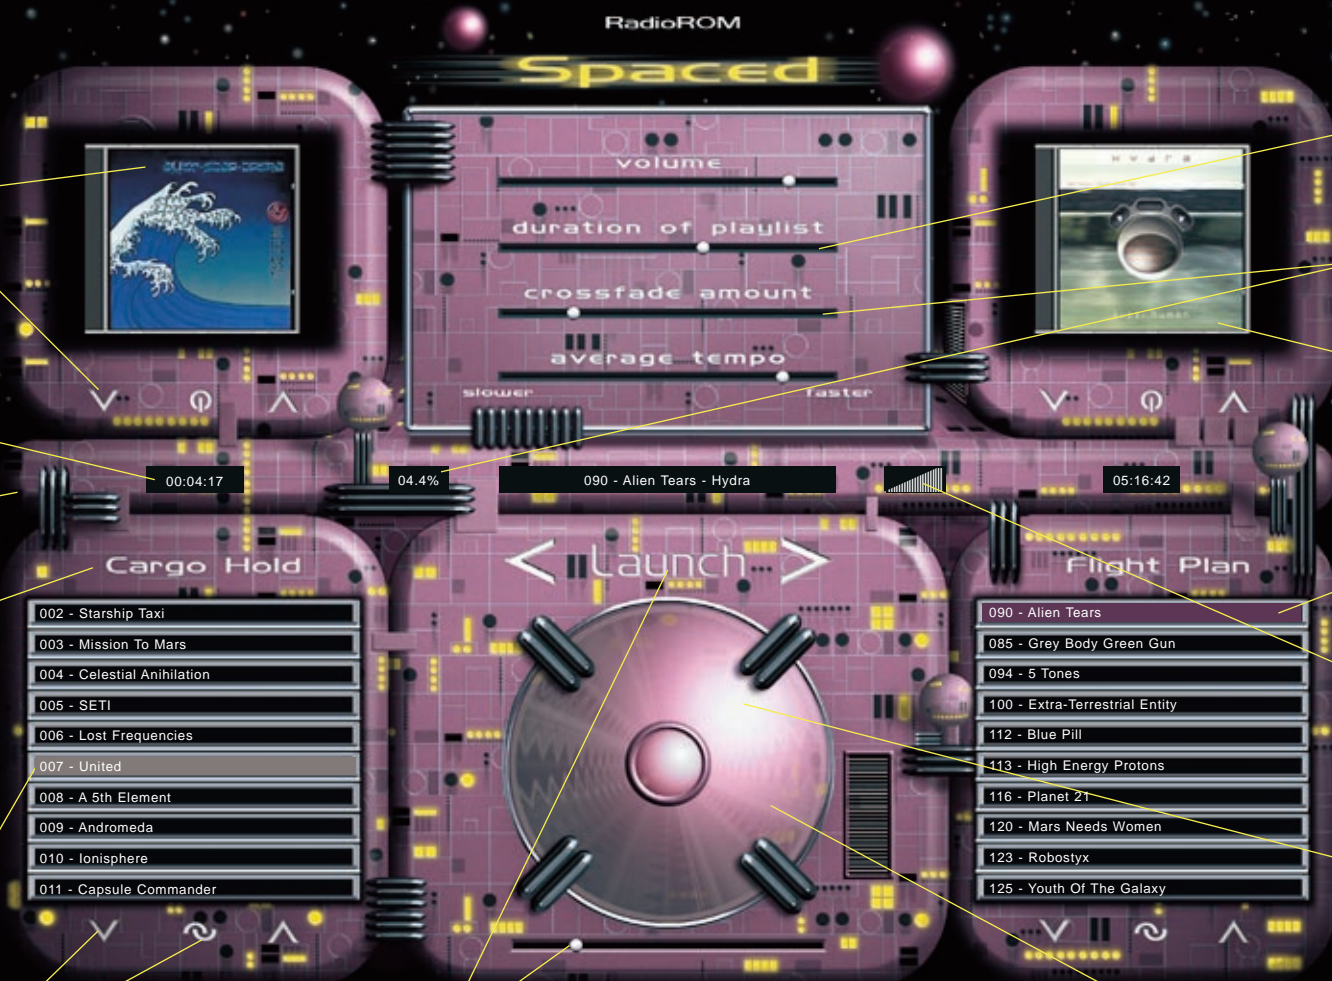

The status bar and both monitors have on/off buttons.

All 100 available tracks are stacked here. They shuffle realistically and you can drag and drop the spines out to play any track individually by double-clicking it and/or inserting it into the playlist stack.

RadioROM is programmed to continue playing music whilst you make playlist adjustments and settings.

As each sleeve is displayed the tracks featured on Cyberg are highlighted in grey in both the selection and playlist racks.

Use the arrow buttons to scroll through the selection stack - click the centre button to toggle between the display of artist name and track name.

Simple, one click control of Play, Pause, Skip Forward and Back functions.
The dial offer you a selection of four pre-set playlists, each one is over three hours long and contains 30+ tracks.
The program slider allows you to cue precisely to any section of an individual track.

Use the main control panel to set volume, automatically generate playlists controlling their duration, and the average tempo.

For seamless play set the tracks to cross-fade by a precise amount; this is calculated as a percentage which displays here.

This screen gives you a choice of viewing channels:
1. Album sleeve
2. Track list & purchaser details,
3. Web links.

To remove a track from the playlist simply drag the spine out and off the player interface area.

Click here to select from five different playlist shapes;
1: Slow to Fast
2: Fast to Slow
3: Middle Peak
4: Middle Dip and
5: Random.

Use the four pre-set playlists or edit them as you desire.

You can generate new playlists automatically in seconds by using the average tempo and duration sliders to create a unique playing sequence each time.

Create your own playlists and save them to disk sectors A, B, C or D.

RadioROM Spaced

Flight One

- 001 Spaced Intro Montage
- 002 Starship Taxi - Hydra
- 003 Mission To Mars - Starburst
- 004 Celestial Annihilation - UNKLE
- 005 SETI Club (Grey Mix) - Hydra
- 006 Lost Frequencies -Genetic Drug
